In a world of ideas
make meaningful change

Study Healthcare Innovations today

Bond University's suite of Healthcare Innovations programs offers a range of professional development opportunities and postgraduate qualifications for healthcare professionals.

From Microcredentials and Graduate Certificates through to a Master's Degree, our flexible offerings empower and prepare our learners to identify opportunities for improvement and lead transformative change in their workplace.

Who are these programs suitable for?

Whether you're looking to learn and apply new skills in your current role, develop more strategic health sector insight, empower your team to lead change or simply support their career progression – Bond University has a program to suit all timeframes and budgets.

What makes these programs unique?

Our Healthcare Innovations programs are designed and delivered by experienced educators, researchers and innovators within Bond's Faculty of Health Sciences and Medicine, the Bond Business School and the University's internationally-renowned Institute for Evidence-Based Healthcare.

Flexible learning options

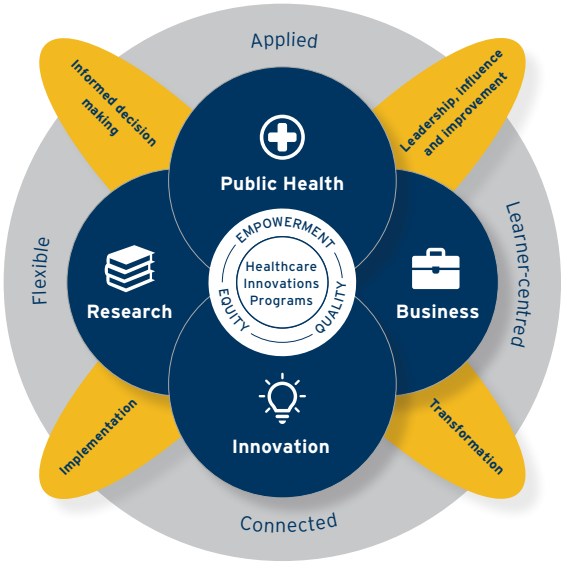
Our curriculum is provided in a flexible and learner-centred manner with self-directed interactive modules and face-to face workshops. Assessment can be applied to your important workplace issues and there are multiple opportunities to network and connect with existing researchers, corporate leaders, and influencers.

Make meaningful change

Our students build plans to implement innovation in their own workplace by reviewing and synthesising research evidence to identify gaps in current practice. While doing this, they are engaging with key stakeholders to understand and analyse their organisational context and together with them, they work through key challenges to implement improvements in local, state, and national practice.

What do these programs teach?

We incorporate subjects from three traditional areas of postgraduate study: business administration, public health and research engagement. At the intersection of these subjects, learners build practical skills around leadership, informed decision making, implementation and transformation.



Individuals who can identify a healthcare challenge and apply design thinking to ***innovate, influence and improve*** our health systems are, and will continue to be, hugely in demand.

Bond University's suite of Healthcare Innovations offerings has been designed for health professionals and leaders who want to implement improvements and lead ***evidence-based*** innovations within health systems.

Flexible, practical and tailored to you

Our Healthcare Innovations suite of offerings

Microcredentials

These courses provide healthcare practitioners with a flexible study option allowing you to undertake professional development at a postgraduate level, without committing to a full degree. We offer two types of Healthcare Innovations microcredentials; single subject microcredentials and self-paced microcredentials.

Graduate Certificate in Evidence-Based Practice

This program will transform the way professionals interpret and keep up to date with the growing volume of research evidence. It will deepen professionals' critical thinking to apply evidence-based practice to maintain high quality practice and inform improvements where appropriate.

Graduate Certificate in Health Systems

Designed to positively challenge the way professionals understand and work within Australian and international health systems. Professionals will be facilitated to compare and benchmark health systems and identify opportunities for evidence-informed innovations.

Master of Healthcare Innovations

CRICOS 099578F

Designed for professionals seeking their next challenge in healthcare. Graduates will be able to shape and refine ways in which they innovate through developing or improving products, processes and/or redesigning services.

What our graduates have to say

"What sets this program apart is its holistic approach that blends business and healthcare topics to improve healthcare delivery strategies. Students are offered diverse perspectives from healthcare users, providers, and systems, allowing innovators to consider various angles and develop solutions that benefit all healthcare stakeholders. This program is an excellent choice for those seeking to make a meaningful impact and contribute to positive changes in the healthcare landscape."

Dr Amy Ignacio
Master of Healthcare Innovations Alumna | Philippines Coast Guard

"The Healthcare Innovations program has given me a new set of skills that has enabled me to achieve real change by implementing a specialist palliative care project in aged care facilities across the Gold Coast.

The program has been a springboard for my personal and professional growth that would have otherwise taken me years of innovation and experience."

Dr Nicola Morgan
Master of Healthcare Innovations Alumna | Staff Specialist Consultant Physician Supportive and Palliative Care, Gold Coast Hospital and Health Services

"The Master of Healthcare Innovations program has given me a unique skillset in which I can connect patient care to health system improvement. The subjects Knowledge Translation in Healthcare and Project Innovation and Change have taught me invaluable theories and concepts. These subjects have given me mindsets and frameworks that are highly applicable if I take on healthcare improvement projects. They helped me better understand the applicability of research and design patient-centred solutions."

Jo Blass
Master of Healthcare Innovations Alumna and MD student | Netherlands
