

# BUILDING A RADIOGRAPHIC DATABASE: WHAT DO TYPICAL BONES LOOK LIKE?

# Purpose:

The purpose of this case study is to generate discussion about research in terms of the principles of the National Statement.

## Assumptions:

1. Assume that all of the governance criteria are met. In this case the researcher effectively works as an independent and has documents supporting the claims to provenance of the data.
2. All of the associated paperwork is included and are in order.

# Considerations

- ⦿ Consider case II in regard to the core values of the National statement;
- ⦿ Ask yourself and your group:
  - ⦿ In what way does this project reflect the values of the National Statement?
    - Research Merit and Integrity
    - Respect
    - Justice
    - Beneficence
- ⦿ It may also be appropriate to consider sections of the Australian Code for the Responsible Conduct of Research (perhaps sections 2 & 4).
- ⦿ What feedback should be provided to the applicant?
