Who are Osler Technology and what do they do?

Osler Technology has created an end-to-end credentialing, accreditation and certification system to allow students and junior doctors to build a credible, objective and competency-based portfolio that links undergraduates with pre-vocational training and beyond, ensuring our next generation workforce are well prepared to execute their role.

This virtual ePortfolio of clinical skills can be taken with the medical student / junior doctor through the health system, improving access to teaching opportunities, reducing unnecessary retraining, maximising their productivity as a new employee and reducing preventable healthcare errors.

Ongoing monitoring of clinical activity and outcomes, benchmarked against a similar cohort globally, provides the evidence-based comparative data to better facilitate performance review and enhancement and automatically trigger recertification pathways.
